A100 SERIES 100 WATT HIGH VOLTAGE DC/DC CONVERTERS

FEATURES

- Customer Selects Output Voltage
- Outputs to 200 Vdc
- Efficiency to 90%
- High Regulation
- Ultra Wide Input Ranges (10-20Vdc, 18-36Vdc, 36-72Vdc)
- Remote On/Off Control
- Continuous Short Circuit Protection

The A100 Series high voltage DC/DC converter offers a highly regulated high voltage isolated output in a six-sided metal case. Their high power density, wide input, and excellent regulation make them ideally suited for applications that demand a high degree of performance. All models will tolerate a short circuit indefinitely. Also included is a Pi input filter and remote on/off.

ELECTRICAL SPECIFICATIONS

Voltage Accuracy .......................................................... +/-1%
Line Regulation .......................................................... +/- 0.2%
Load Regulation ......................................................... +/- 0.3%
Output Ripple ......................................................... < 0.3% P-P
Input Filter .............................................................. Pi Network
Efficiency ............................................................... 90% (typ.)
Short Circuit Protection ............................................. Continuous
Switching Frequency .................................................. 130 kHz
Output Isolation ...................................................... 1000 Vdc
Input / Output Capacitance ......................................... < 100pF

GENERAL SPECIFICATIONS

Temp. Stability ...................................................... +/-0.02%/°C
Temp. (Operating , Case) ......................................... -25 to +70°C
Temp. (Storage) ..................................................... -40 to +125°C
EMI/RFI .............................................................. Six Sided Shield (Case is Connected to -IN)
Derating ................................................................. None
Cooling ................................................................. Free-Air Convection
Thermal Shut Down ................................................ 100°C +/- 5°C (Self-Resetting)

PHYSICAL SPECIFICATIONS

Dimensions ......................................................... 2.75 x 4.8 x 0.92 inches
Weight ................................................................. 13.5 Oz
Case Material ....................................................... Black Coated Metal
(With Non-Conductive Base Plate)
A100 SERIES 100 WATT HIGH VOLTAGE DC/DC CONVERTERS

Customer Selects Output Voltage

The A100 Series are designed such that the customer may order any output voltage from 48Vdc to 200Vdc at no additional charge.

APPLICATION NOTES

INPUT AND OUTPUT IMPEDANCE

The A100 Series of power converters have been designed to be stable with no external capacitors when used in low inductance input and output circuits. However, in some applications, the inductance associated with the distribution from the power source to the input of the converter can affect the stability of the converter. The addition of a 100 µF electrolytic capacitor with an ESR < 1 Ohm across the input helps ensure stability of the converter. In many applications, the user has to use decoupling capacitance at the load.

SHORT CIRCUIT PROTECTION

The A100 Series is equipped with short circuit protection. The converter will fold-back the input power whenever a short circuit is applied to its output and automatically recover after the overload condition is removed.

ISOLATION

The output of the A100 Series is galvanically isolated from both the input and case, capacitance is < 100pF and resistance is > 10G Ohm. The converters case is connected directly to -In to aid in reducing unwanted noise.

RIPPLE AND NOISE

Figure below shows a typical output voltage during turn-on, measured at full rated load current with no additional output filtering.

STARTUP TRANSIENT

Figure below shows a typical output voltage during turn-on, measured at no load current with no additional output filtering.
APPLICATION NOTES

INRUSH CURRENT

The inrush current of the A100 Series has been kept as low as possible. However, a series resistor may be inserted in the input line to limit this current further.

LOAD TRANSIENT

Figure below shows a typical output voltage response, measured during a transition from full rated load current to no load current with no additional output filtering.

Figure below shows a typical output voltage response, measured during a transition from no load current to full rated load current with no additional output filtering.

CONNECTION IN SERIES

Figure below shows how to connect multiple outputs in series with the use of shunt diodes, taking into consideration that the highest achieved output voltage should remain below the rated isolation voltage.

UNIT 1

- Input → Output
- Input → Output
+ Input → Output
+ Input → Output
On/Off → Output

UNIT 2

- Input → Output
- Input → Output
+ Input → Output
+ Input → Output
On/Off → Output

NOTE:
The ratings of Dx should be 1.5 times the maximum current and voltage expected in each branch.

CONNECTION IN PARALLEL

The figure below shows how to connect outputs of several units with equal nominal output voltage in parallel with the use of oring diodes.

UNIT 1

The ratings of Dx should be 1.5 times the maximum current and voltage expected in each branch.
APPLICATION NOTES

REMOTE ON/OFF CONTROL

The On/Off control (Pin 5) allows the user to shut down the converter mechanically or logically using a relay or a TTL or CMOS logic signal.

CLEANING AGENTS

In order to avoid possible damage, any penetration of cleaning fluids must be prevented, since the power supplies are not hermetically sealed.

NUCLEAR AND MEDICAL APPLICATIONS

American Power Design products are not designed, intended for use in, or authorized for use as critical components in life support systems, equipment used in hazardous environments, or nuclear control systems without the express written consent of American Power Design, Inc.

TECHNICAL REVISIONS

The appearance of products, including safety agency certifications pictured on labels, may change depending on the date manufactured. Specifications are subject to change without notice.

SAFETY REQUIREMENTS

The converters are designed to meet North American and International safety regulatory requirements per UL 60950-1/CSA 22.2 No. 60950-1-07 Second Edition, IEC 60950-1:2005, and EN 60950-1:2006. Basic Insulation is provided between input and output. To comply with safety agencies requirements, an input line fuse must be used external to the converter. The table below provides the recommended fuse rating for use with this family of products.

<table>
<thead>
<tr>
<th>Input Voltage Range</th>
<th>Fuse Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>10-20Vdc</td>
<td>18A</td>
</tr>
<tr>
<td>18-36Vdc</td>
<td>10A</td>
</tr>
<tr>
<td>36-72Vdc</td>
<td>5A</td>
</tr>
</tbody>
</table>

If one input fuse is used for a group of modules, the maximum fuse rating should not exceed 20A.

WARRANTY

All products manufactured by American Power Design, Inc. (APD) are warranted to be free of defects due to material or workmanship for a period of one year from date of shipment. At our option, APD will repair or replace any non-conforming product.

APD expressly disclaims any liability for consequential or incidental damages resulting from the use or misuse of its products by the purchaser or others.

This warranty is in lieu of all warranties expressed or implied, including the warranties of merchantability. No other warranties, obligations, or liabilities are expressed or implied.

All products being returned for repair require a return material authorization (RMA) assigned by APD prior to return shipment.
